“Why I Built a Barrel Lift”

“When I was about five or six years old I fell off a wagon loaded with 1500 feet of bridge lumber and the left hind wheel of the wagon went over me between my hips and ribs. The doctor who was called said that my back was broken and was very doubtful for some time as to whether I would live. For a long time I was hauled around by my brothers and sisters in a small wagon that my uncle made. The wagon had supports on each side that fitted under my arms which allowed me to sit up and watch the other boys and girls play.

“After many months I was allowed to sit up without any supports. It was a long time before I could walk. For a number of years I was warned that I could not carry anything or attempt to lift anything heavy because I had a broken back. This fact was so impressed on my mind that I have never lifted anything heavy during my life. I believe that I have just as good a back as any man of my age or weight but I have no desire to prove it. I only have one back and I am not going to take a chance.

“During the past three years I have operated a service station. I have purchased and handled many barrels of oil. As long as I had plenty of help I could handle a barrel of oil, but there came times when it was necessary to open a new barrel of oil and no help was to be had. I started to work trying to devise some means whereby one man could handle a barrel of oil alone. A barrel of oil weighs about 450 pounds. The Barrel Lift Truck is the result.”

T. S. TRULLINGER, Inventor.

Barrel Lift Trucks

are built in **TWO SIZES**, to fit your needs
for both wooden and iron barrels.

ECONOMICALLY PRICED AT

\$30.00

G. R. GALLANT

E. M. GALLANT

GALLANT AUTO COMPANY
ESSEX MOTORS — HUDSON MOTORS
533 Duane Street, Between 11th and 12th
Telephone 289

Astoria, Oregon, August 26, 1929.

Barrel Lift Company,
85 Columbia Blvd., Kenton Station,
Portland, Oregon.

Gentlemen: I am writing you this letter to inform you that one of my employees, Mr. C. Heintzelman, service department, was severely injured while endeavoring to lift a 50 gallon barrel of lubricating oil, having severely sprained his back, and is now confined to his home under the care of Dr. F. H. Vincil.

We are pleased to know that your company is now manufacturing and offering for sale a barrel lift truck, which can be operated with safety, and eliminate the possibility of a repetition of such an unfortunate accident.

It will be our pleasure to install your barrel lifting truck just as soon as it is possible for you to make delivery of same to us.

We realize the danger, not only to physical welfare and health of our employees, but also the economy and simplicity of operation of your barrel lifting truck, will eliminate lost time and accidents of this kind.

We are convinced that every establishment, dealing in or handling merchandise in 50 gallon barrels should safeguard the health and welfare of themselves and employees by installing in their respective places of business your barrel lift trucks.

Yours very truly,
GALLANT AUTO COMPANY,
By G. R. GALLANT, Manager.

Barrel Lift Company,
H. R. McFeeters,
Astoria, Oregon.

Dear Sir: With reference to the injury of Mr. Clair Heintzelman of this city, he was injured while attempting to lift a barrel of oil where he is employed—the Gallant Auto Co.

The injury consists of a wrenched sacro-illiac joint.

Yours truly,
F. H. VINCIL.
